The Digital Racing Technology you've been waiting for

Minimum Specifications

- Pentium PC/Notebook with
- 256MB RAM
- CD-ROM or DVD
- Large, fast Hard Disk
- Colour XGA Screen
- Custom Keyboard (optional)

System Highlights

✓ Horse & Jockey Registration

All details and profile on horses, jockeys and even trainers can be stored in a flexible organized, relational database with a wide range of reports.

✓ Race Management & Cataloguing

DVRace has complete cataloguing functionality that allows you to record and access race information via event, date, time, venue, conditions, track and more.....

✓ Automated Race Vision Capture & Organiser

The system has a unique digital video capture and race organizer module which allows you to collate race footage into discrete, compressed digital video files. This module is fantastic time saver which automatically files and collates the footage into logical naming conventions.

✓ Quick Race Vision Access & Review

Race analysts and officials can select and click to play any race vision instantly from a menu of catalogued races. As long as the vision has been capture in the right format then footage can be played easily.

✓ Incident Logging Module

Inherited from our classic electronic scoresheet for other sports, the incident logging module is a unique aid to log race incidents as the stewards review the race. An incident can be anything of note or interest such as fall, whip breach, interference, query, etc. In fact race analysts and stewards can make up their own incident categories. Once logged against the footage, the events can quickly and easily preview or extracted onto a DVD or edited highlight video file.

✓ Advanced Biomechanical Analysis

One of the DVRace elite options is called **SharpEye** which gives race analysts and stewards the ability to easily break up the footage frame by frame. Particularly useful in inquiries where detailed analysis of the incidents may be necessary. The biomechanical tools like drawing, split screen, slow motion and frame by frame functions will be extremely useful.

✓ Host System Data Import

If required, DVRace has utilities available that can accept formatted race data from the host database, subject to specification. The system will comfortably import text, XML or spreadsheet format on a record by record basis.

✓ Flexible Configuration—Home, Office or Track

DVRace is modular in design with total flexibility in mind so that operators can have a system ideally configured for their usage and priorities. Whether it be the latest, compact notebook computers or a multimedia desktop computer, DVRace will operate fine.

✓ Exclusive StatsSpeak Audio logging feature

DVRace is available to be upgraded to our world first StatsSpeak voice activated login which allows operators to talk events and incidents into the system rather than using mouse and keyboard.

✓ Advanced Query and Analysis

The ability to ask any question of the data in the system and then to query and filter the results and automatically play the race vision is exclusive for the DVRace our application in the racing industry and this feature alone makes DVRace an exceptional package

✓ Easy Archive/Storage of Footage

On compact, portable (pocket size) firewire hard drives, DVD's or other media, the race footage can be easily archived for future reference.

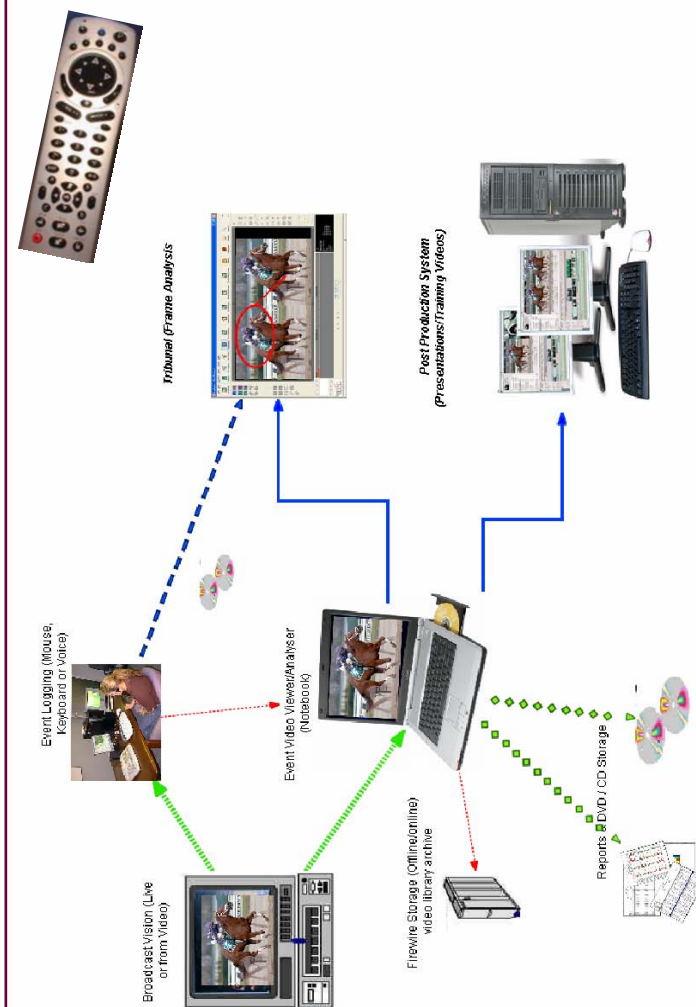

✓ Free Support & Upgrades Included

All systems include a free premium support and help line during normal office hours for the first 12 months. Any additional support such as training, installation, etc is offered at a reduced rate.

✓ Most importantly — Cost Effective \$\$\$\$

The DVRace system is extremely cost-effective and affordable which cost a fraction of comparable digital video systems but we are open to discuss payments if that is preferable.
